

DOM

1.Clone HTML div when it is clicked and change the background of the new copy to a random color then append it to the body.

2. Simple Calculator.

Implement the required functions in an external file to let calculator.html works properly

B. Event Object

3. Alert ASCII Code of any key pressed and detect whether it is alt key or ctrl key or shift key.

4. Prevent context menu from being displayed by preventing from mouse right click from its action.

Note: context menu is the menu displayed when mouse right button is clicked.

C. Form Validation

5. Create a simple form with Add and Reset buttons takes user's information (name age and email) with validation for each field and all fields are required.

Every time the user enters a right data and press Add button the data is displayed in the table as shown in fig 3

Name

Age

E-mail this field is required

Name	Age	E-mail
